Fluid Phase Equilibria 101 (1994) 271–272

FLUID PHASE EQUILIBRIA

Contents of Volume 101 (1994)

Theoretical papers

A unified m(ω) relation for cubic equations of state
C.F. Leibovici (Pau, France) 1–2

Application of the GF-D equation of state to fluid phase equilibrium calculations: Pure fluids of low molecular weight compounds to polymer molecules
C.S. Wu and Y.P. Chen (Taipei, Taiwan) 3–26

A modification of the Wilson equation with only binary parameters for ternary liquid–liquid equilibria
J.-F. Huang and L.-S. Lee (Chung-li, Taiwan) 27–51

A generalized correlation for the interaction coefficients of nitrogen–hydrocarbon binary mixtures
G. Avlonitis, G. Mourikas, S. Stamataki and D. Tassios (Athens, Greece) 53–68

An equation of state for benzene in the gas phase
A.E. Elhassan, R.J.B. Craven and K.M. de Reuck (London, UK) 69–88

Calculation of the critical high pressure liquid–liquid phase equilibria of binary mixtures containing ammonia. Unlike interaction parameters for the Heilig–Franck equation of state
Y.S. Wei and R.J. Sadus (Hawthorn, Vic., Australia) 89–99

A new Corresponding-States Group-Contribution method (CSGC) for estimating vapor pressures of pure compounds
P. Li, P.S. Ma, S.Z. Yi, Z.G. Zhao and L.Z. Cong (Tianjin, People's Republic of China) 101–119

A new perturbation method for electrolyte solutions based on MSA
J. Wu, J. Lu and Y. Li (Beijing, People's Republic of China) 121–136

A modified perturbed hard-sphere equation of state
G. Aly (Lund, Sweden) and I. Ashour (Elminia, Egypt) 137–156

Structure and thermodynamics for some small polar interaction-site fluids
B. Kvamme (Porsgrunn, Norway) 157–185

Application of the LCVM model to multicomponent systems: Extension of the UNIFAC interaction parameter table and prediction of the phase behavior of synthetic gas condensate and oil systems
N. Spiliotis, C. Boukouvalas, N. Tzouvaras and D. Tassios (Athens, Greece) 187–210

Experimental papers

Partition of dipeptides in aqueous polymer two-phase systems as a function of pH in the presence of salts
J. Bringmann, B. Keil and A. Pfennig (Darmstadt, Germany) 211–225

Vapour pressures at several temperatures and excess functions at 298.15 K of *n*-butanol + 2-methylpentane, and + 3-methylpentane
R. Garriga, F. Sánchez, P. Pérez, J. Valero and M. Gracia (Zaragoza, Spain) 227–236

High-pressure phase equilibria for carbon dioxide–2-methyl-2-propanol and carbon dioxide–2-methyl-2-propanol–water: Measurement and prediction
J.S. Kim, J.H. Yoon and H. Lee (Taejon, South Korea) 237–245

Phase equilibria in binary mixtures of ethane and propane with sunflower oil
J.C. de la Fuente, G.D. Mabe, E.A. Brignole and S.B. Bottini (Bahía Blanca, Argentina) 247–257

Determination of ternary azeotrope at subatmospheric pressures
Q. Wang, G. Chen and S. Han (Hangzhou, People's Republic of China) 259–266
